DEVELOPMENT.**

ABOUT GROUP

CELIK CONSTRUCTION COMPANY'S OCCUPATIONAL HEALTH AND SAFETY POLICY

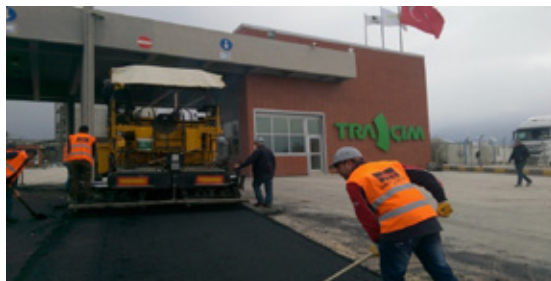

In all our project processes; environmental awareness, health, and safety of our employees are our main priority. In this

The approach of **Celik Construction Company** is focused on preventing negativities and accidents while mitigating the effects of unforeseen events. The health and safety work management system is a structure that is adopted by **Celik Construction Company** teams and administrative staff and is a structure in which everyone can make these systems a part of their lives.

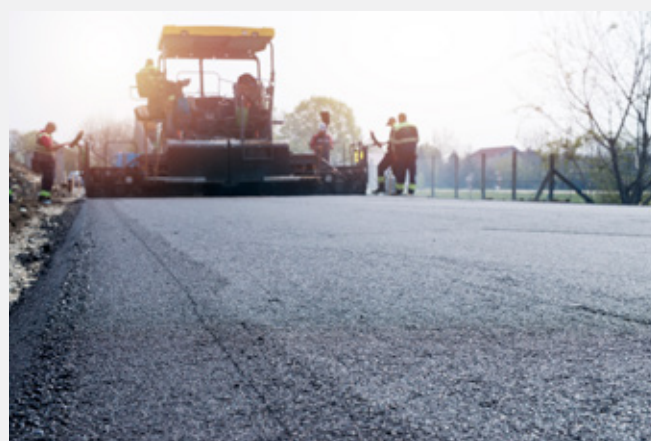

Celik Construction Company considers health and works safety culture as an important element of its own culture. It is the primary duty of all managers and employees to create and develop common behaviors, habits, beliefs, and values in this regard, and to pay attention to the confidentiality of information about individuals without harming public health when necessary.

Within the scope of legal responsibility, **Celik Construction Company** draws on the OHS culture of its employees not only its employees but also its customers, suppliers, and subcontractor personnel at the same time with periodic training given before the work for all its employees. For this purpose;

- To meet all legal and other obligations related to Occupational Health and Safety,
- Employers should not adopt the principle that Occupational Health and Safety improvement activities are the common responsibility of all employees,
- Risk Assessment and Risk Level Reduction activities should include goals for participation at all levels,
- Occupational Health and Safety is committed to achieving the goal of a sustainable "Zero Work Accident" by continuously improving our culture.
- The idea of healthy and safe promotion and sustainability is an important influence that enables us to invest in the future with innovations.

ROAD CONSTRUCTION STEPS

ROAD CONSTRUCTION STEPS

It consists of two stages, preparation of road construction road project and road construction.

During the preparation of the road project, the following works are carried out:

1. Investigation of road route,
2. Application of exact route,
3. Creation of the polygon network on the road route,
4. Removal of the current strip on the road,
5. Drawing and calculation of longitudinal and transverse sections,
6. Volume calculations and soil distribution with brückner curve,
7. Calculation of road cost.

The studies conducted in the stage of road construction are

1. Piling of chamfer piles,
2. Construction of the infrastructure (soil works) and art structures (Grilles, Bridges, Viaducts, Buildings such as Akkad.),
3. Upper construction (Lower foundation, Plentmix, Bituminous foundation, Binder, Wear),
4. Construction of road accessories (strip lines, auto railing, etc.).

POWER TRANSMISSION AND DISTRIBUTION

As the CelikC company and other joint venture partners, also we are in power transmission and distribution business sector.
